

STEM QUEST CHALLENGE:

Space Careers Investigation

There are many opportunities to work in the space sector. The recipe is simple. Keep studying STEM subjects. STEM subjects are highly transferable and can be used in many other jobs, not just the space sector.

To so: You have seen a number of different jobs and people working within the STEM sector. Investigate one job in more detail at home and share a space career with your family, friends and teacher.

Space Career:

Briefly describe what you would do in that job role:

What is it about this job that interests you?

What qualifications would you need to carry out the job? (Think about year 9 choices, post 16 and higher education courses)

If someone said *"You can only be an astronaut in Space"*, what would you say?
