

# Rocket's Telescope

Build your own constellation telescope and look up to the stars like Rocket!

1. Choose a constellation square and cut it out along the dashed line.
2. Use a sharp pencil to poke holes through the white dots. Put Blu Tack behind the paper to protect your fingers.
3. Take a cardboard tube and put plenty of glue around one end.
4. Glue the tube to the constellation. Make sure you line up the end of the tube on the white circle.
5. Now look through your telescope and you'll see your constellation.

When you get home try turning off the lights and shining a bright torch (like the one on a mobile phone) down the tube. You should be able to see the stars projected on your bedroom wall.
