

## Trevor Cox (he/him)

Acoustics engineer at Salford University

***“Constraints is often what drives innovation. So I think from an engineering point of view, actually putting constraints on it, it’s often where the ingenuity and the creativity comes in, because you’re trying to come up with a solution!”***

Trevor **collaborates** with others to create **imaginative** solutions to sound-related problems: from better hearing aids to quieter home appliances. His **passion** about talking science and engineering has recently led him to interview a series of engineers for the Inventive podcast.

Like Trevor, I am:

**Collaborative**

**Imaginative**

**Passionate**
