

Sound box

Contents	
	4x Life Size Human Ear Model Contains: removable eardrum, hammer and anvil and 2 part labyrinth with stirrup, cochlea and balance nerve. Key provided.
	Sound muffling and insulation boxes. Designed for use in experiments on how well different materials muffle sound. Providing a constant fixed sound, it's perfect for fair test experiments. Add cotton wool or any other materials to show the effect they have on sound travel. Comes with inbuilt buzzer and switch. You will need to provide AA batteries.
	Decimeter Handheld Sound Meter Easy to use electronic meter ideal for investigating how sounds get fainter as the distance from the sound source increases. It has a background noise absorber to filter ambient sounds and a max min record and max hold function.
	Set of 10 tuning forks Use to demonstrate how sounds are made, how vibrations produce sound and the relationship between frequency and wavelength.
	Slinkies Use to model the way sound waves move through materials. Can this QR code for an explanation.
